

# Microeconomics II

Lecturer: Noriaki Matsushima\*

February 1, 2016

## 1 The 4th SAQ

As I said in the class on 1st February, I do not assign the 4th short answer question (SAQ). There are two reasons:

1. The time constraint. This is the main reason.
2. The achievement in the previous three SAQs is not so good.

I guess that it would be difficult to make answers quickly. Each SAQ would require you to solve those questions quickly although I did not intend to require such skills for you.

## 2 Final examination

The 4th SAQ is merged with the final examination. The full marks of the final examination will become 50.

- Check the materials used in the class. This is the most important.

First of all, please clearly understand the important concepts in the class. Understanding the difference between those concepts is also important.

Second, please learn how to derive equilibrium/equilibria, by using the concepts. Solving the problems in the text book and the TA session is a way to improving your skill.

- Some (slightly) extended questions will be assigned.
